Disclaimer

- This presentation contains “forward-looking statements”- that is, statements related to future, not past, events. In this context, forward-looking statements often address our expected future business and financial performance, and often contain words such as “expects” , “anticipates”, “intends”, “plans”, “believes”, “seeks”, or “will”.

- Forward-looking statements involve inherent risks and uncertainties. We caution you that a number of important factors could cause actual results to different materially from those contained in any forward-looking statement. Such factors include, but are not limited to: our highly competitive environment; the cyclical nature of our business; our ability to develop new products; and our successful execution in new business developments.

3Q26 Financial Summary

- Quarterly revenue reached NT$ 3.088bn, +15.2% q-q but -36.5% y-y, mainly due to component shortages disrupting notebook PC shipment. While new businesses have entered the initial mass production phase, they have yet to achieve economies of scale, resulting in a top-line miss.
- Gross margin was 22.0%, -6.9pp q-q and -6.6pp y-y, mainly due to weak revenue momentum and rising raw material costs. Coupled with increased R&D expenses, opt margin declined to -6.0%, -7.8pp q-q and -20.5pp y-y.
- Weakening NTD led to net FX gains of NT$ 180mn in 3Q26; net interest income reached NT$ 1.367bn during the same period.
- NPBT reached NT$ 1.721bn, +3.2% q-q and -54.0% y-y.
- NPAT reached NT$ 1.295bn, -4.4% q-q and -54.7% y-y.
- Basic EPS was NT$ 2.45 in 3Q26 (NT$ 2.51 in 2Q26, NT$ 4.58 in 3Q25).
- CAPEX was NT$ 296mn in 3Q26 (NT$ 310mn in 2Q26, NT$ 143mn in 3Q25).
- D&A was NT$ 473mn in 3Q26 (NT$ 416mn in 2Q26, NT$ 389mn in 3Q25).
- EBITDA was NT$ 289mn in 3Q26 (NT$ 464mn in 2Q26, NT$ 1.092bn in 3Q25).

* EBITDA = Operating Profit + Depreciation + Amortization

Transformation

CATCHER confidential

Long-term Growth vs. Shareholders Return

Long-term Growth

Core business – leading total-solution provider of metal structured parts

- Strengthening global operation layout to sustain competitive advantage

Diversification – expanding technology platforms into high-value-added industries (AI, medical supplies, semiconductor, aerospace) with strong growth potential

- Expanding core competencies and applications of new technologies via organic growth and product certifications
- Seeking strategic alliances and partnerships via equity investments as well as domestic and overseas M&As

Shareholder Return

Stable dividends – aiming for >60% annual dividend payout

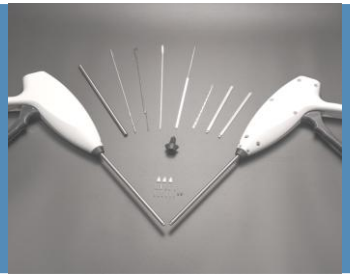

- Dividend payout ratio exceeded 60% in 2021-2025
- No less than NT$10 per share was distributed annually in 2015-2025

Share buyback – flexibly executed in response to market conditions

- Eleven buybacks (over NT$50 billion) were executed in 2020-2026, marking the highest amount among all listed firms in Taiwan
- The shares purchased in the first ten batches were all retired, reducing the Company's paid-in capital by a total of more than 30%

Transformation and Diversification

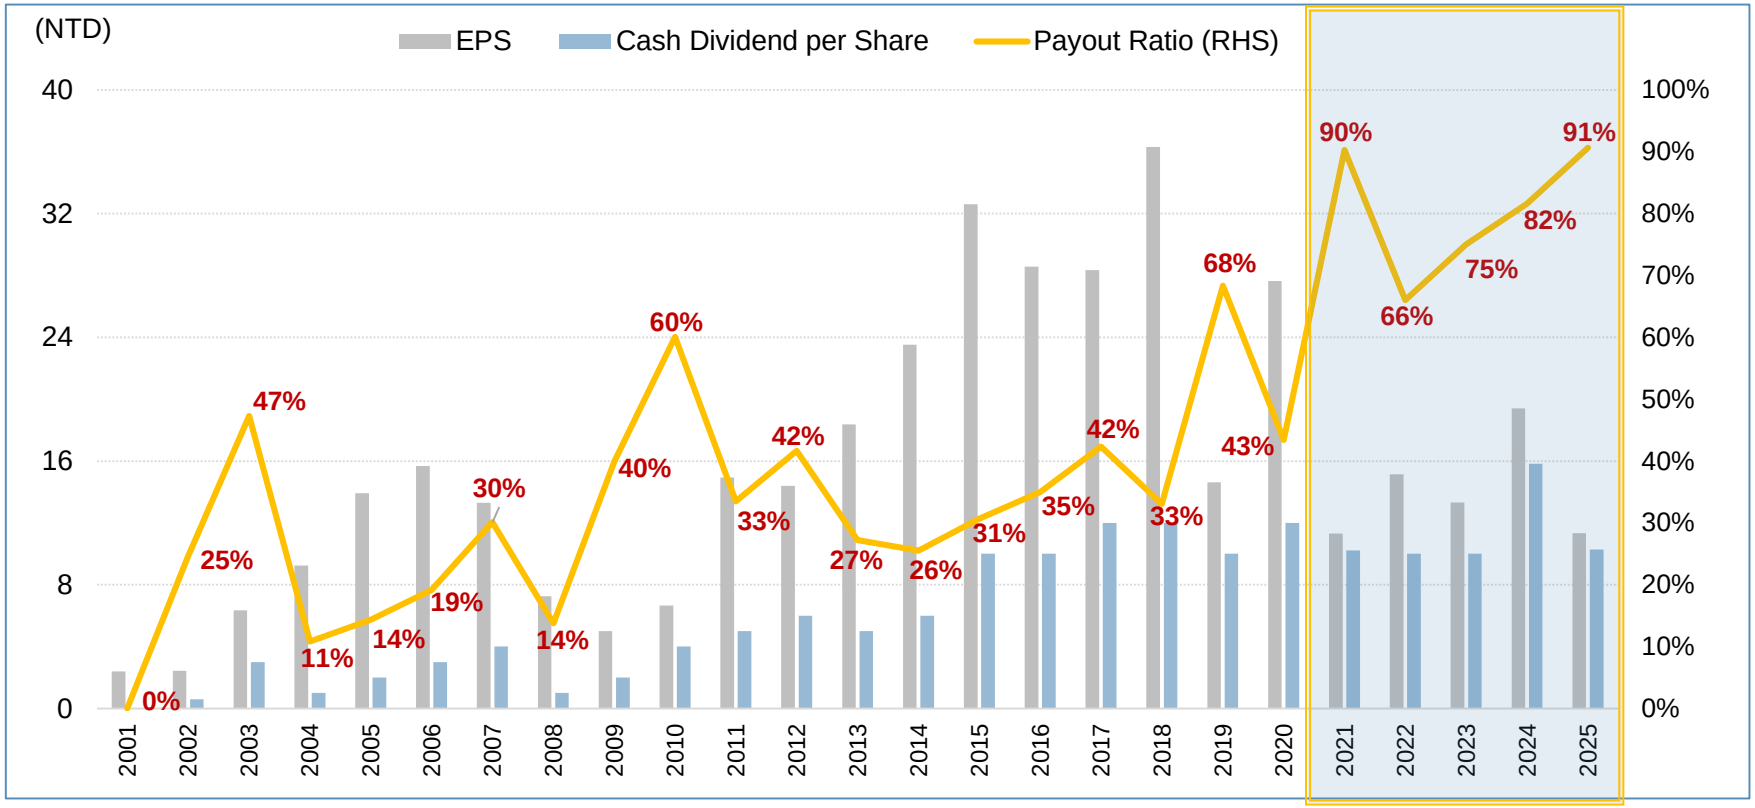

AI Server Mechanical and exterior components	**Medtech** Minimally invasive surgical devices, orthopedic implants	**Semiconductor** Automation equipment components	**Aerospace** Precision components
Business Expansion • Joined NVIDIA's supply chain, providing mechanical solutions for high-density AI servers and rack-scale systems • Actively evaluating AI-related business opportunities	**Strategic transformation I** • ISO 13485 certified in 2021 & FDA registered in 2023 • Received orders from international clients for the design, R&D, and manufacturing of components, structured parts, and finished products, delivering integrated hardware and software solutions • Acquired a neuro-modulation CDMO business • Seeking strategic financial investments while continuously assessing potential M&A opportunities	**Strategic transformation II** • Obtained orders and started production • Seeking strategic financial investments while continuously assessing potential M&A opportunities	**Strategic transformation III** • AS 9100 (Quality Management System) certified • Obtained orders from international clients and started production, with product applications including engine and drone components. • Seeking strategic financial investments while continuously assessing potential M&A opportunities

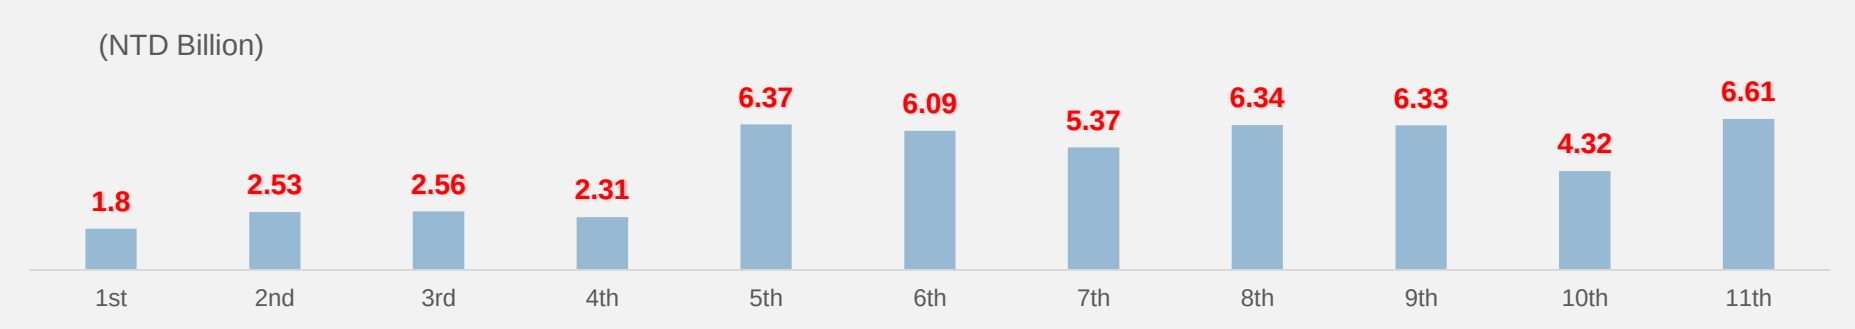

Dividend Policy

- Catcher Technology continues to balance capital allocation and shareholder returns through dividend distributions and share repurchase programs.
- The Company has maintained a stable dividend policy, distributing no less than NT$ 10 per share in cash dividends annually in 2015-2025.
- The cash dividend payout ratio exceeded 60% each year in 2021-2025.

Share Buyback

- The share buyback program provides Catcher Technology with flexibility to cope with changing market conditions.
- The Company has executed eleven buybacks in 2020-2026, with a cumulative amount of over NT$ 50 billion – the highest among listed firms in Taiwan.
- The shares purchased in the first 10 buybacks have all been cancelled, reducing capital by more than 30%.

Milestones

Evolving from an aluminum alloy die-casting manufacturer into a leader in comprehensive structural component solutions

1980s

Early Deployment of Magnesium Alloy Die-Casting Technology

- Founded in 1971.
- Initiated development of magnesium alloy die-casting technology; introduced Taiwan's first magnesium hot chamber die-casting machine from West Germany to produce HDD actuator arms.

1990s

Growing Global Recognition of Technology

- Established mature mass production capabilities for high-precision die-cast components, successfully expanding into international markets and becoming an approved supplier to leading global HDD manufacturers.
- Became the first company in Taiwan to achieve mass production of magnesium alloy die-cast notebook components, with continued qualification and recognition from leading international customers.

2000s

Rapid Business Expansion

- Secured product certifications from leading global brands and commenced mass production shipments of PDA and mobile phone casings.
- Expanded into the desktop PC chassis business, obtaining product certifications and orders from major international customers.
- Continued investing in advanced machinery and equipment, while China manufacturing facilities progressively ramped up to mass production.
- Successfully completed the listing on the Taiwan Stock Exchange.

2010s

Leading Manufacturer of Structural Components for Consumer Electronics

- Expanded CNC production capacity for unibody aluminum-magnesium alloy smartphone casings, establishing the Company as one of the world's leading structural component manufacturers.
- Continued expanding manufacturing capacity in China to support business growth.
- Achieved consecutive record highs in both revenue and profitability.
- Further strengthened market leadership through continuous innovation in multi-material processing technologies.

2020s

Transformation Initiated

- Divested the Suzhou and Taizhou facilities as part of the Company's exit from the smartphone business, while accelerating diversification into non-ICT sectors, including medical technology, semiconductor equipment, and aerospace.
- Partnered with ITRI on the "Next-Generation Integrated Surgical Instrument Development" project to jointly develop a precision dual-modality minimally invasive surgical system.
- Obtained ISO 13485 certification for medical device quality management and AS9100 certification for aerospace quality management.
- Expanded into the neurostimulation medical CDMO business through subsidiary acquisitions.
- Continued evaluating overseas manufacturing expansion opportunities, including the acquisition of land in Thailand's AMATA Industrial Estate.

Global Layout

- Catcher Technology’s primary manufacturing bases are located in Suqian, China, and Tainan, Taiwan.
- Among major domestic component suppliers, the Company remains the only player that continues to maintain substantial production capacity in Taiwan.
- In response to global supply chain realignment, the Board approved a US$50 million initial investment in land at Thailand's AMATA City Chonburi Industrial Estate in 2024.

Core Competencies

Comprehensive Materials and Process Matrix

Integrated end-to-end solutions across multiple materials, processes, and surface treatments

Innovation Lab

Supports the development of advanced products

- Materials Lab / Thermal Engineering Lab / Chemical Lab / Mechanical Reliability Lab

Flexible & Customized Design

Rapid realization of product concepts

- Design for Manufacturability (DFM): Ability to quickly provide material and process design recommendations based on customer requirements, enabling lower-cost production, improved product performance, and shorter time-to-market

Automated Production

Ensuring high yield rates and on-time delivery

- Adoption of in-house developed and manufactured automation equipment
- Implementation of automated optical inspection (AOI) systems to ensure top-tier quality

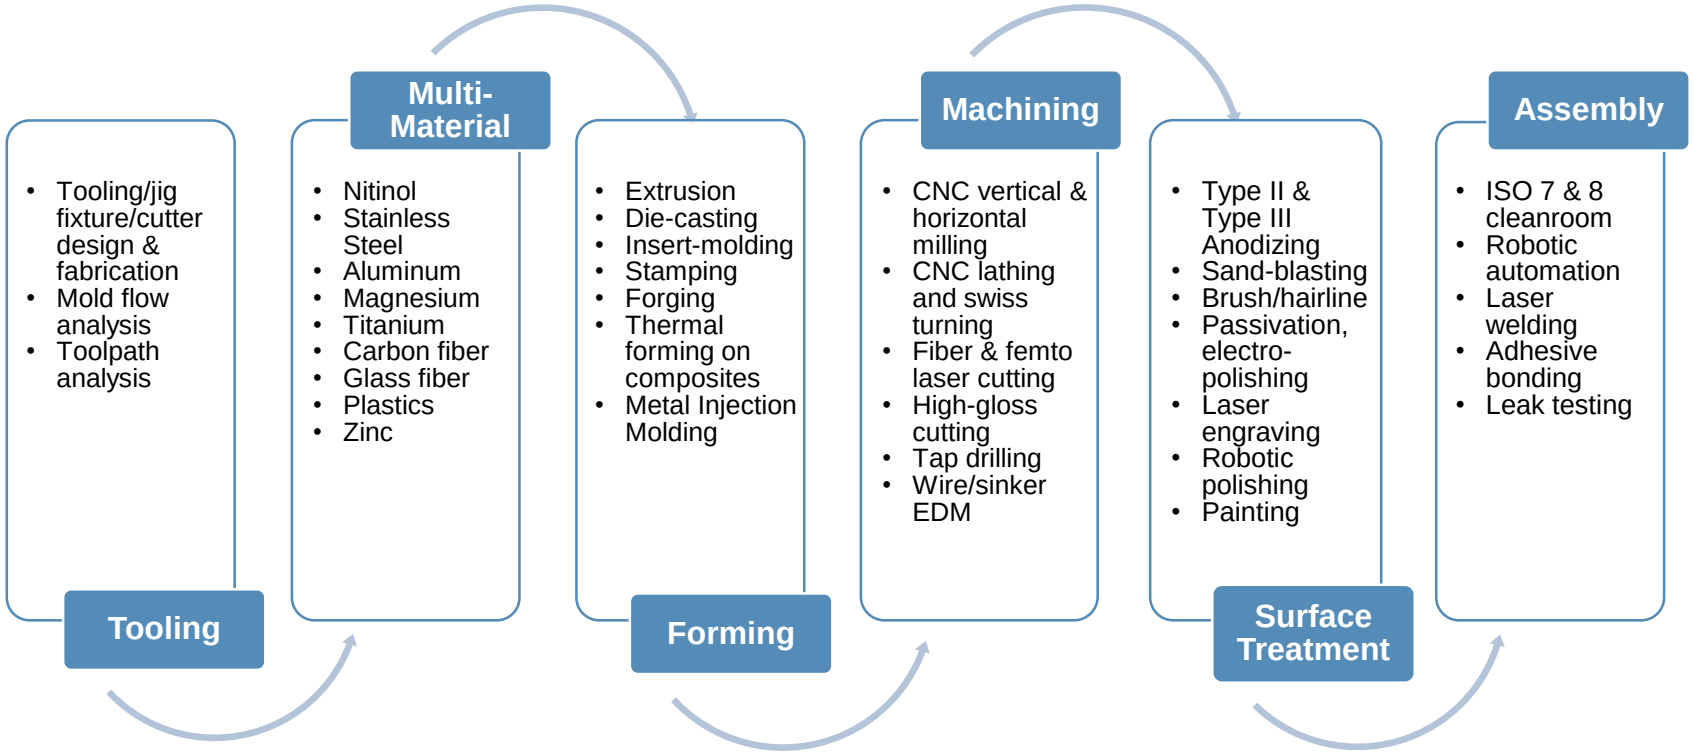

Smart Manufacturing

End-to-end quality control from raw materials to finished products

- Traceability: Capability to track and analyze production data across all stages—from raw materials, processing, to final products—reducing risk occurrence and response time, while significantly enhancing production efficiency and quality control

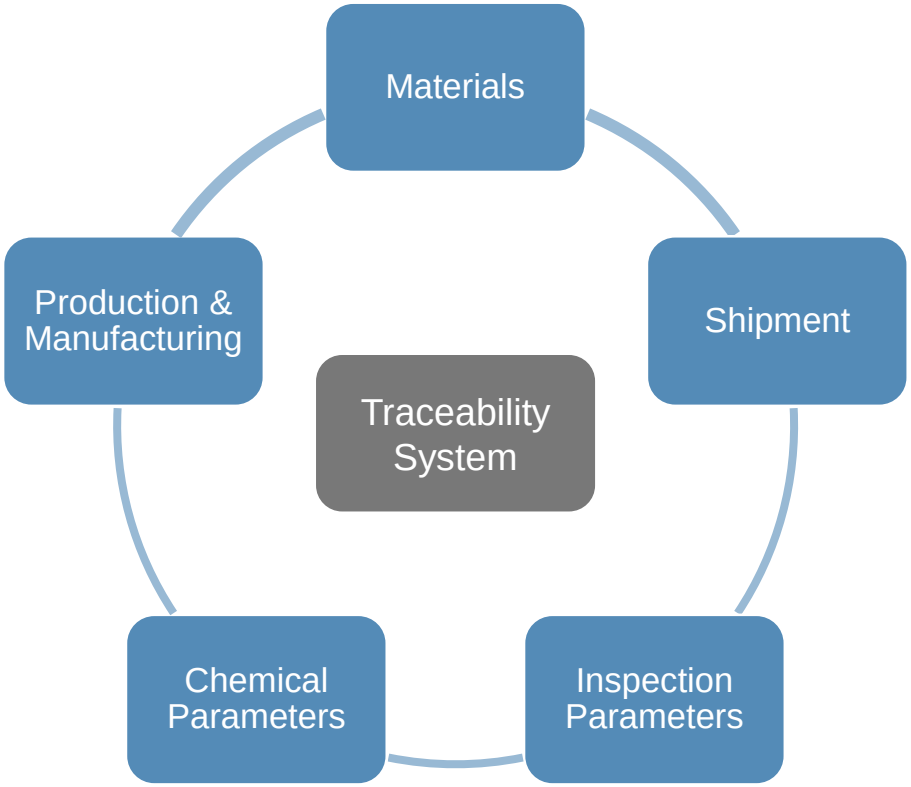

Comprehensive Materials & Process Matrix

Catcher Technology works closely with customers from the early design stage, leveraging its comprehensive expertise in materials, forming processes, precision machining, and surface treatment. This enables the Company to deliver high-quality products while rapidly responding to diverse customer requirements for lightweight design, structural integrity, and premium aesthetics.

Smart Manufacturing (Traceability System)

End-to-end quality control from raw materials to finished products

- Maintain a complete production history, including who performed the work, what was produced, when and where it was manufactured, how it was processed, and the materials and equipment used.
- Enable full traceability of production and inspection processes for comprehensive review and audit purposes.
- Strengthen production discipline and enhance process control across manufacturing operations.
- Provide detailed data records to support root cause analysis and quality investigations.
- Identify high-risk products and ensure end-to-end traceability across the supply chain to guarantee complete recall execution when necessary.
- Leverage traceability data to review and refine production processes for continuous improvement.

Smart Manufacturing (Traceability System)(1)

Traceability Scope

- **Raw Materials:** Lot number, process conditions, and incoming quality control (IQC) inspection data
- **Key Consumables:** Cleaning agents, polishing materials, pigments, and other critical consumables
- **Tooling & Fixtures:** Usage history, dimensional data, and related IQC inspection records

Monitoring & Recorded Parameters

- **CNC Machining:** Tool inventory, program version control, automated tool life management, and real-time IPQC feedback with automatic machine shutdown
- **Anodizing:** Rack ID, position tracking, flying bar ID, real-time chemical concentration monitoring, color and gloss inspection, film thickness measurement, and linkage to key chemical batch data
- **Other Processes:** Data linkage for critical consumables and components, along with key process parameter monitoring
- **Inspection:** Machine learning-based visual inspection, full IPQC inspection data and defect details, and final quality control (FQC) inspection results

Recording Mechanism

- Barcode & scanner
- IoT-based component identification and automatic defect containment

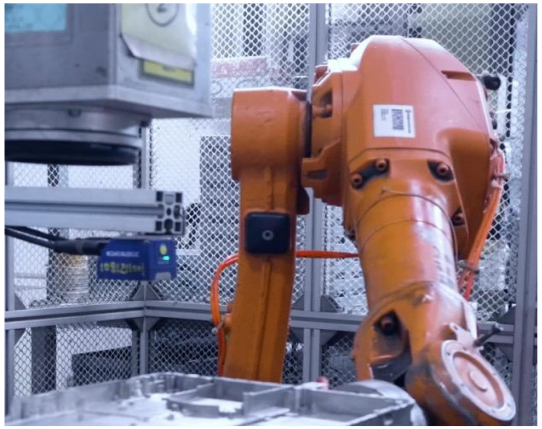

Smart Manufacturing (Traceability System)(2)

How Catcher leverages smart manufacturing systems

Rapid Resolution of Quality Issues

- Enables full traceability down to key process parameters, raw materials, consumables, and inspection data, supporting effective root cause analysis.
- Allows precise identification and tracking of high-risk products across the production and supply chain.
- Shortens response time for quality issue containment and resolution.

Excellent Quality Management

- Enables work-in-process (WIP) differentiation and control through barcode-based tracking.
- Supports continuous process monitoring with real-time alerts and automatic shutdown mechanisms to ensure production stability.
- Implements tooling and cutting tool life monitoring to optimize usage and maintain process quality.
- Utilizes predictive equipment monitoring to enable preventive maintenance and reduce unplanned downtime.

Accelerated New Product Development

- Leverages manufacturing process parameters to shorten the learning curve for New Product Introduction (NPI).
- Drives continuous product and process improvement through experimental feedback and structured issue analysis.
- Establishes an institutionalized knowledge base for cutting tool life management and optimal manufacturing parameters.

ESG Spotlights

FTSE4Good
TIP Taiwan ESG Index

TIP
Taiwan Index Plus

In June 2026, Catcher was selected again as constituent stocks in the "Taiwan Sustainability Index"

- Invested in the Clean Energy Fund to support the development of the green energy industry, with cumulative investments totaling nearly US$65 million.
- Installed solar power systems across all manufacturing sites (Suqian and Taiwan), with an estimated annual generation of approximately 30 million kWh of green electricity.
- Manages product carbon footprint through green procurement initiatives and continuously improves waste and water reuse rates. Recycled aluminum is used in nearly 100% of low-carbon manufacturing processes.
- Obtained SBTi validation for its Commitment Letter in 2025, becoming the 12th company in Taiwan's electronics hardware industry to receive this certification.
- Achieved a "B" rating (Management level) in CDP disclosures for both Climate Change and Water Security.
- Consistently included in the FTSE4Good Emerging Index and the Taiwan Sustainability Index, ranked in the top 6–20% in Corporate Governance Evaluations, and received an AA rating (Top 15%) in TIP Taiwan Sustainability Ratings.

Honors and Awards

2004~2005

- Ranked top 3 by China Credit Information Service Ltd.in terms of overall operational performance among Taiwan's Top 1000 Taiwanese Enterprise in China.
- Established Topo Suzhou Plant and started mass production in China.

2006

- Selected by Forbes as one of the 200 best companies in Asia and one of the 200 steadily growing small and medium-sized enterprises in Asia.
- Ranked 19th in Asia's Top 50 Enterprises conducted by the Business Week.
- Selected as a future blue chip stock by Standard & Poor's.

2007

- Ranked 1st among Top 10 Benchmark Enterprises Investing in China, and the 2nd among Top 10 Segment Group in China Qualifying for Overseas IPO in the evaluation conducted by China Credit Information Service Ltd.

2011

- Awarded Top 100 Taiwanese Innovative Enterprises for 2011 by the MoEA.
- Hailed as "Top 100 Taiwanese Technology Enterprises for 2011" by Digitimes.

2012

- Ranked among the World's 1000 Fastest Growing Enterprises by the International Business Times.
- Rated by Digitimes among Taiwan's Top 100 Technology Enterprises for 2012, ranked 5th in terms of profitability, and 7th in terms of revenue expansion in Asia.

2015~2016

- Ranked by Forbes among Asia's Top 50 Best Companies.
- Chairman Hung was ranked the 3rd among Taiwan's Top 50 Best-performing CEOs by Harvard Business Review; Catcher was ranked No.1 in the category of technology and computer peripherals.
- Ranked among the top 10 of Nikkei Asia 300.

2017

- Awarded Forbes Global 2000 and ranked the 178th in the growing company segment.
- Ranked by Forbes 51st among its Top Multinational Performers under Forbes Global 2000.
- Ranked 14th in Nikkei Asia 300.

2018

- Ranked among the 1000 High-Growth Asia-Pacific Companies by Financial Times.
- Ranked the 15th in Nikkei Asia 300.
- Awarded Forbes Global 2000 and ranked the 188th in the growing company segment.
- Ranked the 24th among the Forbes Top 100 Digital Companies, first among Taiwanese companies.

2019~2026

- Awarded the Best Electronics Manufacturing Company by Global Brands.
- Chairman Hung has been honored four times in the Harvard Business Review listing of the "Top 100 CEOs in Taiwan."
- Awarded the ISO 9001 Plus by SGS.
- Awarded among the Top 100 Carbon Competitiveness in 2025 by Business Weekly.
