Investor Presentation

1Q 2026 Version

May 2026

Safe Harbor Statement

This presentation contains forward-looking statements based on currently available information and the Company's current expectations and assumptions. These statements may include, but are not limited to, projections regarding future business performance, market opportunities, industry trends, and strategic initiatives.

Actual results may differ materially from those expressed or implied due to various risks and uncertainties, including but not limited to changes in market demand, technology developments, supply chain conditions, customer deployment schedules, and broader economic or geopolitical factors.

The Company undertakes no obligation to update or revise any forward-looking statements, whether as a result of new information, future events, or otherwise.

This presentation is provided for informational purposes only and does not constitute investment advice. The Company, its affiliates, and their respective representatives assume no liability for any loss arising from the use of the information contained herein.

	QoQ	↓	↗	↗	↓
	YoY	↗	↗	↗	↓

I. Financial Highlights:

First Quarter 2026

Portfolio Transition Toward Infrastructure-Centric Growth

HPC and Capital Equipment continue increasing as a percentage of overall sales mix, reflecting rising infrastructure complexity and broader participation across AI-related deployment layers.

- HPC and SPE continue representing the primary long-term growth drivers of the portfolio
- Business mix increasingly reflects higher infrastructure content and system-level complexity
- Diversified portfolio structure continues supporting operational resilience across varying cycles

Growth Drivers	
YoY	QoQ
-6%	-1%
+23%	+19%
+125%	+4%

II. Operational Highlights: First Quarter 2026

Infrastructure Scaling Continues Across Multiple Platforms

AI infrastructure deployment is becoming increasingly cumulative, with HPC and semiconductor infrastructure requirements continuing to scale across overlapping platform cycles.

- HPC growth increasingly driven by rising rack-level complexity and infrastructure content
- Capital Equipment demand supported by ongoing system integration and outsourcing trends
- Infrastructure deployment cycles becoming longer-duration and less sequential

BizLink: HPC Sales (USD, '000)

BizLink: Capital Eqpt Sales (USD, '000)

III. Corporate Highlights: First Quarter 2026

AI Infrastructure Scaling Is Becoming Increasingly Complex

As AI infrastructure scales, deployment requirements are increasingly shifting beyond compute alone toward interoperability, power density, validation depth, and system-level infrastructure readiness.

- Platform transitions are becoming more overlapping and less sequential across infrastructure generations
- Rack-level requirements continue increasing across power, cooling, and interconnect architectures
- Deployment execution increasingly depends on validation capability, interoperability, and infrastructure readiness

Why This Supports BizLink's Long-Term Positioning

As infrastructure architectures diversify and system complexity rises, customers increasingly require partners capable of supporting multiple connectivity, power, and integration layers across evolving deployment environments.

- Participation across copper interconnects, optical connectivity, and power infrastructure layers
- Global engineering and manufacturing footprint supporting deployment flexibility and operational resilience
- Increasing customer engagement across validation, integration, and system-level execution activities

Q&A

Thank You
